

PROBLEM

- A local water company had experienced numerous breaks/leakage in a reinforced concrete water line.

SOLUTION

- HDPE pipe's coefficient of friction and compensated flow allowed for the downsizing necessary to "slip-line" with a smaller diameter pipe.
- One continuous 2000 FT + length of HDPE pipe
 - on-site "butt-fused" joints
 - flexibility of HDPE pipe

IMPACT TO CUSTOMER

- Pulled into the host pipe – even through the sweeps of the original installation
- No infiltration/exfiltration in the system
